

Algebra qualifying exam, Spring 2016

1. Classify the groups of order 24 having trivial center.

2. Let V be a finite dimensional vector space over a field of characteristic p and let $T : V \rightarrow V$ be a linear transformation such that $T^p = I$, the identity transformation of V .

a) Determine the eigenvalues of T .

b) Show that there is a basis of V for which the matrix of T is upper triangular,

3. Let G be the group with presentation

$$G = \langle x, y \mid x^4 = 1, x^2 = y^3 \rangle$$

and let $[G, G]$ be the commutator subgroup of G . Determine the structure of the group $G/[G, G]$.

4. Let $\mathbb{Q} = e^{i=10}$. Find all the subfields K of $\mathbb{Q}(\sqrt[10]{2})$ such that $[K : \mathbb{Q}] = 2$ and express each of them in the form $K = \mathbb{Q}(\sqrt[10]{d})$ for some $d \in \mathbb{Z}$.

5. Suppose n and m are positive integers, let $R = \mathbb{Z}[X]/(X^n)$ and let M be an R -module, let x be the image of X in R , and let (x^m) be the ideal in R generated by x^m . Compute $\text{Tor}_i^R(M, (x^m))$ for all i .

6. Let k be a field. Find the minimal primes and compute the Krull dimension of $k[x, y, z]/(xy, xz)$.

7. Let R be an Artinian local ring. Prove that an R -module is flat if and only if it is free.

8. Suppose that R is a Noetherian ring and \mathfrak{p} is a prime ideal such that $R_{\mathfrak{p}}$ is an integral domain. Show that there is an $f \in R$ such that R_f is an integral domain. (Recall that $R_f = S^{-1}R$ where $S = \{1, f, f^2, f^3, \dots\}$.)
